

What is string?

String is sequence of characters. When characters are stored in array then it is known as string.

- String index always starts with 0.
- The last character of string is NULL('\0')

Some pre-defined functions to manipulate strings

- strlen()
- strrev()
- strcat()
- strcmp()
- strcpy()
- getline() [String input function]
- push_back()
- pop_back()
